

RICE BREEDING STRATEGIES FOR STRENGTHENING FOOD SECURITY AND NUTRITION

OUR PRODUCTS

New super yielding rice varieties

We have super yielding rice lines recording yields above 10 tonnes/ha compared to the current production of rice. This means through breeding we have been able to double the current rice production compared to current local farmers' average yield

Super Pishori

- We are achieving this through;
- a.) Gene pyramiding to produce super aromatic pishori.
 - b.) Selection to retain pure unadulterated pishori.

Super yielding dwarf pishori line

We are realizing this by making dwarf Pishori variety can take more nitrogen fertilizer without lodging hence higher yield through hybrid seed technology.

Food Security

Zero Hunger

No Poverty
